

Concept 1:

Component 1 - Enhanced Maintenance of North Dearborn and Whites Hill Roads

Based on available information, there are several items which could improve safety, operations and driver experience on North Dearborn and Whites Hill Roads that can be implemented at a relatively low cost.

- Fix reoccurring roadway drainage/flooding areas
 - Repair pavement slippage or crumbling/deterioration problems
 - Remove or relocate roadside obstructions such as; trees, mailboxes, etc. that are located within roadway right-of-way that pose potential driving hazards
 - Add mailbox turnouts to remove stopped vehicles from travel lanes
 - Repair, replace or add guardrail as needed
 - Improve signage
 - Add lighting at key intersections
 - Provide 2 ft. minimum shoulders where possible
- The Study Team recommends a systematic process be taken to address these needs along the entire lengths of North Dearborn and Whites Hill Roads between State Line Road and SR 46.
