

# Other General Recommendations:

## SR 46 and US 52 Improvements

Based on review of the existing roadway network between the Bright Area and I-74, the Study Team proposes that the two general improvements below to state roadways be included in Study's Final Recommendation.

### Replace SR 46 bridge over Whitewater River

- The Indiana Department of Transportation (INDOT) reports that the current bridge is in fair condition and structurally sound, but is considered functionally obsolete due to substandard shoulders and roadside barriers.
- While not an immediate need, the bridge is a candidate for replacement in approximately 20 years.

### Improve sight distance on US 52 East of SR 46

- A hump in the road results in visual impairment for drivers at the westbound I-74 ramps at US 52
