

Concept 1: Final Recommendations

With the alternatives narrowed from 4 concepts to 1, the Study Team now presents the Final Recommendations for public review and comment.

Concept 1 – Improve Existing Roads includes three components:

- Component 1 - Enhanced Maintenance of N. Dearborn and Whites Hill Roads
- Component 2 - North Dearborn Road Improvements
- Component 3 - Whites Hill Road Improvements

In addition to Concept 1, public input and further staff review has resulted in the following three other general recommendations:

- Replace SR 46 bridge over Whitewater River
- Improve sight distance on US 52 east of SR 46
- Future evaluation of other existing roads used to access the interstate, not included in the scope of this Study.

The image below was the single exhibit presented during Phase 2 for Concept 1. Now, in Phase 3, the three components of Concept 1 are presented in three separate exhibits
